Overall dimensions:

51.5" Diameter x 16"H

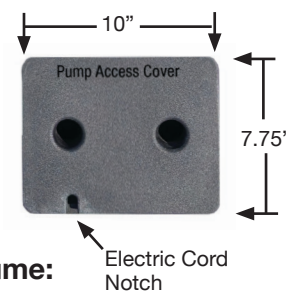

Grate dimensions:

48" Dia. (both halves)

Inner reservoir dimensions, below the grate:

Approx. 46" Dia. x 13"H

Pump access cover dimensions:

Reservoir volume:

95 gallon capacity

Max static load rating:

Up to 1,200 lbs.

Product weight:

Approx. 65 lbs.

(Basin, grates, and pump access cover)

What is the product used for?

The 48" Achelous AquaBox® is designed as a foundation and reservoir for recirculating water in displays with large fountains. This basin is molded with 4 supports. It houses the center support, pump, plumbing, auto fill valve and 95-gallon water reserve.

When do you use this product?

Use when installing a recirculating fountain piece in almost any landscape or hardscape environment. Blue Thumb AquaBox® basins can be installed in ground or above ground depending on the desired elevation of the fountain display.

How is it sized?

Basin size is determined by the dimensions and weight of the fountain pieces it must support, as well as the desired flow rate and flow pattern that is expected from the fountains. The goal is to retain as much of the recirculating water as possible.

Special features:

- Easy pump access with 2 pump access locations, covers included
- Includes one 4" rigid PVC center support for added grate strength
- Spinweld to accommodate an optional auto fill valve
- Easy plumbing installation through molded holes in the grate
- Strong structural design manufactured in the USA using Polyethylene (PE)

Recommended add-on products:

- Auto Fill Valve paired with a 30 psi Regulator for automatic water level maintenance
- Splash Apron to help prevent water loss
- 4-6 bags of Polished Pebbles to cover grate when finishing
